ABSTRACT

The purpose of "**Online Food Ordering System**" project is to automate the existing manual system by the help of computerized equipment's. Food Industry has always been a profitable industry not only for manufacturers, suppliers, but also for the users, distributers. A Real-time online food ordering system for the customer is our proposed system. Food can be ordered online in a hassle-free manner through our proposed system from restaurants as well as mess services. A Food Menu is set up online and as per their wish customers can simply place their order through the proposed system. Also, customers can effortlessly track the orders with a food menu. For the initial implementation of the system application pay-on-delivery payment system and card system is used. Separate accounts are maintained for each user for more secured ordering by providing an ID and a password.
